

Protein domain annotation in E. coli K-12

Comparison of targeted Pfam sets, global Pfam-A annotation, DUF content, and hypothetical protein characterization

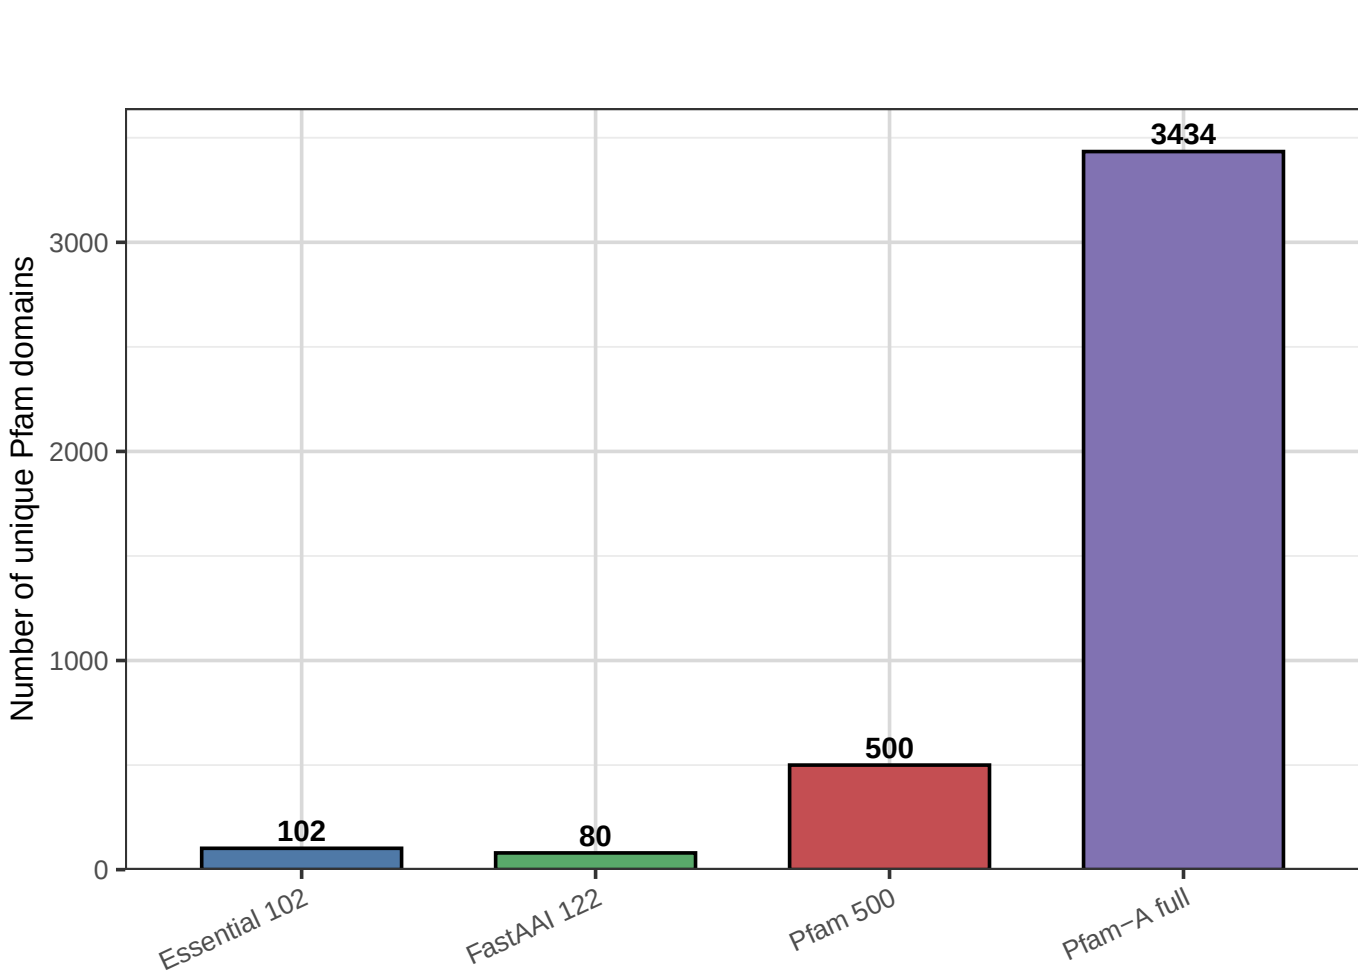

A. Protein coverage across Pfam sets

Fraction of E. coli K-12 proteins matched by each Pfam set

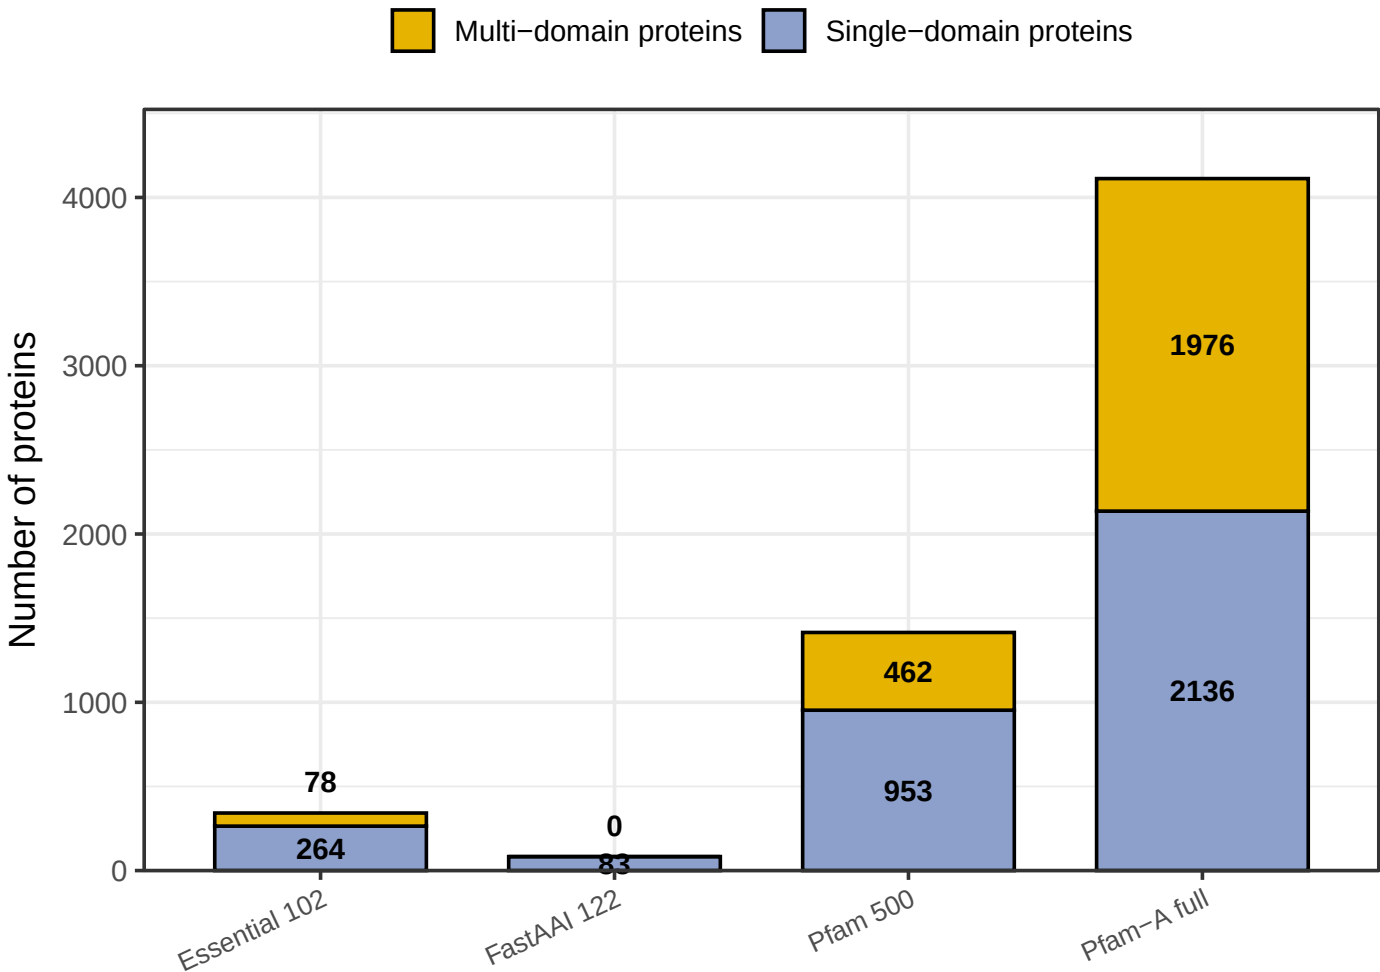

B. Unique Pfam domains detected

Functional diversity captured by each Pfam set

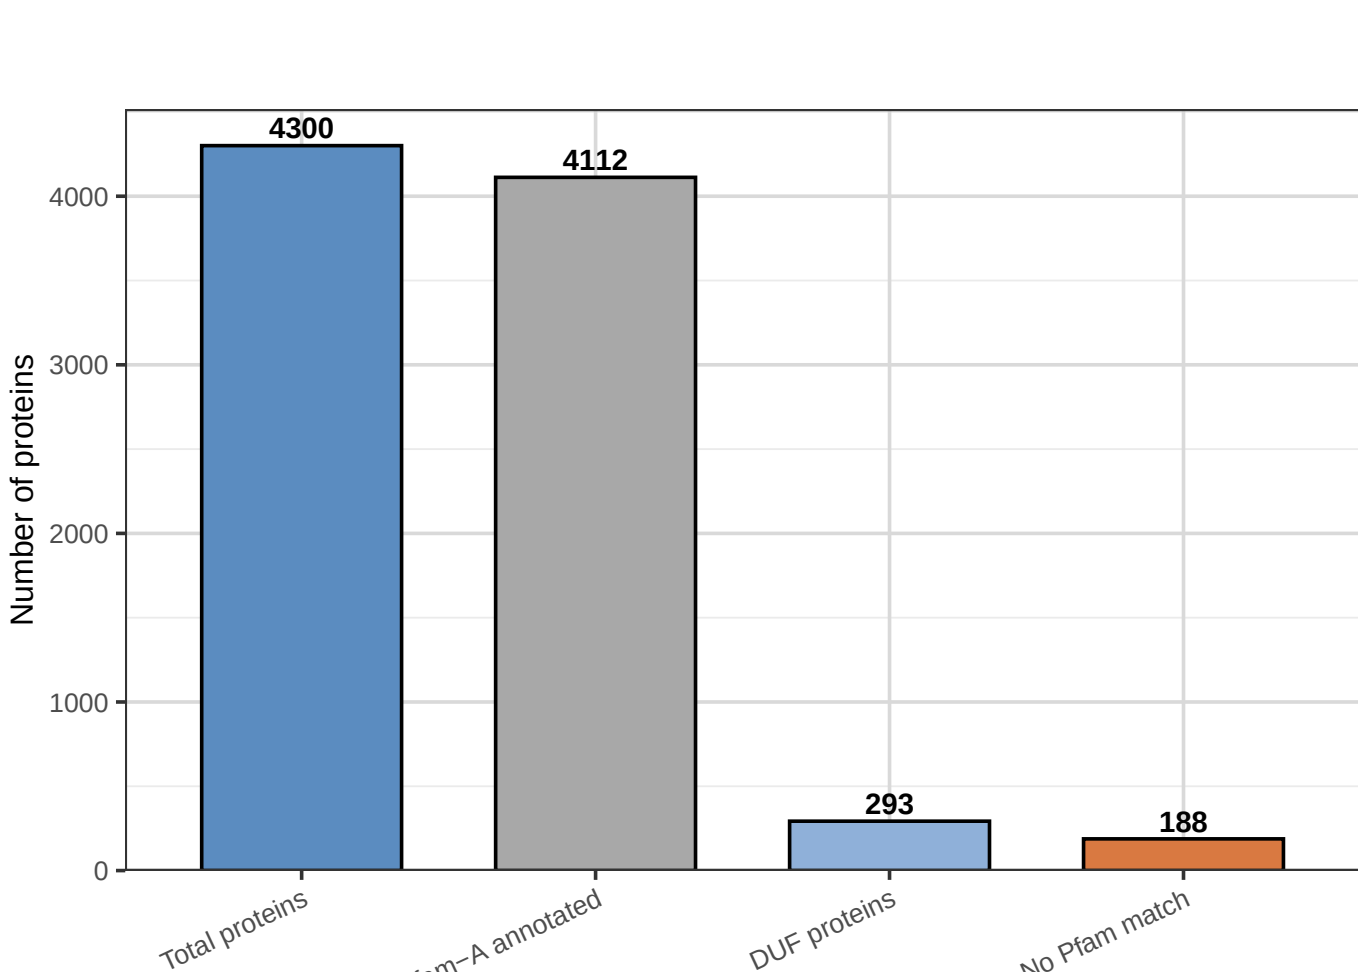

C. Protein domain architecture across Pfam sets

Single-domain versus multi-domain proteins

D. Protein annotation landscape of E. coli K-12

Global Pfam-A annotation and DUF overview

E. Hypothetical protein annotation (n = 107)

Pfam-A and DUF characterization of hypothetical proteins
